**Abstract:** *The research paper is regarding impact of GST on Indian Economy. With the introduction of GST there is a condition chaos and confusion among common man. The aim this research paper is to explain the mechanism of GST and its effects on Indian economy. In India, the idea of GST was contemplated in 2004 by the Task Force on implementation of the Fiscal Responsibility and Budget Management Act, 2003, named Kelkar Committee. The Kelkar Committee was convinced that a dual GST system shall be able to tax almost all the goods and services and the Indian economy shall be able to have wider market of tax base, improve revenue collection through levying and collection of indirect tax and more pragmatic approach of efficient resource allocation. Under the Goods and Service Tax mechanism, every person is be liable to pay tax on output and shall be entitled to enjoy credit on input tax paid and tax shall be only on the amount of value added. The historic GST or goods and services tax has become a reality. The new tax system was launched at a function in Central Hall of Parliament on 1<sup>st</sup> July ,2017 (Friday midnight). GST, which embodies the principle of "one nation, one tax, one market" is aimed at unifying the country's \$2 trillion economy and 1.3 billion people into a common market. Under GST, goods and services fall under five tax categories: 0 per cent, 5 per cent, 12 per cent, 18 per cent and 28 per cent. For corporates, the elimination of multiple taxes will improve the ease of doing business. And for consumers, the biggest advantage would be in terms of a reduction in the overall tax burden on goods. "Inflation will come down, tax avoidance will be difficult, India's GDP will be benefitted and extra resources will be used for welfare of poor and weaker section," Finance Minister Arun Jaitley said at GST launch event in Parliament. The Lok Sabha has finally Passed the Goods and Services Tax Bill and it is expected to have a significant impact on every industry and every consumer. Apart from filling the loopholes of the current system, it is also aimed at boosting the Indian economy. This will be done by simplifying and unifying the indirect taxes for all states throughout India.*

### **I. Introduction**

GST stands for Goods and Services Tax levied by the Government in a move to replace all of the indirect taxes. In India, the idea of GST was contemplated in 2004 by the Task Force on implementation of the Fiscal Responsibility and Budget Management Act, 2003, named Kelkar Committee. The Kelkar Committee was convinced that a dual GST system shall be able to tax almost all the goods and services and the Indian economy shall be able to have wider market of tax base, improve revenue collection through levying and collection of indirect tax and more pragmatic approach of efficient resource allocation. Under the Goods and Service Tax mechanism, every person is be liable to pay tax on output and shall be entitled to enjoy credit on input tax paid and tax shall be only on the amount of value added. The principal aim of GST is to eliminate cascading effect i.e. tax on tax and it will lead to bringing about cost competitiveness of the products and services both at the national and international market. GST System is built on integration of different taxes and is likely to give full credit for input taxes. GST is a comprehensive model of levying and collection of indirect tax in India and it has replace taxes levied both by the Central and State Governments. GST be levied and collected at each stage of sale or purchase of goods or services based on input tax credit method. Under this system, GST-registered commercial houses shall be entitled to claim credit of the tax they paid on purchase of goods and services as a part of their day to day businesses.

The historic GST or goods and services tax has become a reality. The new tax system was launched at a function in Central Hall of Parliament on 1<sup>st</sup> July ,2017 (Friday midnight). GST, which embodies the principle of "one nation, one tax, one market" is aimed at unifying the country's \$2 trillion economy and 1.3 billion people into a common market. Under GST, goods and services fall under five tax categories: 0 per cent, 5 per cent, 12 per cent, 18 per cent and 28 per cent. For corporates, the elimination of multiple taxes will improve the ease of doing business. And for consumers, the biggest advantage would be in terms of a reduction in the overall tax burden on goods. "Inflation will come down, tax avoidance will be difficult, India's GDP will be benefitted

and extra resources will be used for welfare of poor and weaker section," Finance Minister Arun Jaitley said at GST launch event in Parliament.

The Lok Sabha has finally Passed the Goods and Services Tax Bill and it is expected to have a significant impact on every industry and every consumer. Apart from filling the loopholes of the current system, it is also aimed at boosting the Indian economy. This will be done by simplifying and unifying the indirect taxes for all states throughout India.

## **II. Research Methodology**

The research paper is based on empirical study. It is a type of descriptive research paper.

### **Objectives of Study:**

1. The first objective of the paper is to highlight the impact of GST on Indian Economy.
2. The second objective is to explain the working mechanism of GST in India.

### **Importance of the Study:**

1. The study will highlight the effect of GST on Indian Economy.
2. It will prove to be of great help to a common man to understand the concept the GST.
3. It will remove the morbid fear of GST from among the business community members.

### **Data Collection:**

This paper is a descriptive paper based on secondary data collected from different books , news-paper articles and research journals.

### **Need for GST:**

1. The main reason behind introducing GST is to improve the economy of the nation.
2. VAT rates and regulations differ from state to state. And it has been observed that states often resort to slashing these rates for attracting investors. This results in loss of revenue for both the Central as well as State government.
3. On the other hand, GST brings in uniform tax laws across all the states spanning across diverse industries. Here, the taxes would be divided between the Central and State government based on a predefined and pre-approved formula. In addition, it would become much easier to offer services and goods uniformly across the nation, since there won't be any additional state-levied tax.
4. GST rollout missed several deadlines due to disagreement among many states over certain important issues on the new tax reform. However GST is scheduled for a nation-wide rollout on July 1<sup>st</sup>, 2017

### **Features of GST**

1. GST is one indirect tax for the entire nation, which will make India "one unified common market".
2. It will replace multiple taxes like VAT, CST, Excise Duty, Entry Tax, Octroi, LBT, Luxury Tax ect.
3. There are four types of GST namely:
  - a) SGST – State GST, collected by the State Govt.
  - b) CGST – Central GST, collected by the Central Govt.
  - c) IGST – Integrated GST, collected by the Central Govt.
  - d) UTGST – Union Territory GST, collected by the Union Territory
4. Tax Payers with an aggregate turnover in a financial year up [ Rs. 20 Lakhs & Rs. 10 Lakhs for North Eastern Sates and Special Category States] would be exempted from tax.
5. GST slabs are pegged at 5%, 12%, 18% & 28%.

### **Impact of GST in India :**

#### **Positive Impact of GST in India:**

1. GST is a single taxation system that will reduce the number of indirect taxes. From now, a single taxation term would cover all of those indirect taxes.
2. The prices of products and services would reduce, thus this system would prove to be beneficial for the people who are fed up of paying high prices.
3. This would reduce the burden from the state and the central government. With the introduction of GST, all indirect taxes would come under a single roof.
4. GST would not be charged at every point of sale like other indirect taxes so in this way, market would be developed.
5. Corruption-free taxation system. GST would introduce corruption-free taxation system.
6. Less tax compliance.

7. Removes cascading effect of taxes.
8. Manufacturing costs will be reduced, hence prices of consumer goods likely to come down.
9. Due to reduced costs some products like cars, FMCG etc. will become cheaper.
10. A unified tax regime will lead to less corruption which will indirectly affect the common man.

**Negative Impact of GST in India:**

1. The introduction of GST in the country will impact real estate market. This would increase new home buying price by 8% and reduce buyers' market by 12%.
2. GST is a mystifying term where double tax is charged in the name of a single tax.
3. Most of the dealers don't pay central excise tax and cheat the government by simply giving the VAT. But all of those dealers would now be forced to pay GST.
4. The short-term impact of GST is expected to be neutral-to negative for the broader economy.
5. Production processes are likely to take some time to align with the new framework as firms adjust to the input tax credit system and better manage working capital requirements.
6. For consumers, it will be a mixed bag as some goods become cheaper while others will be expensive.
7. Services will become expensive e.g. Telecom, banking, airline etc.
8. Being a new tax, it will take some time for the people to understand its implications.
9. It is easier said than done. There are always some complications attached. It is a consumption based tax, so in case of services the place where service is provided needs to be determined.
10. If actual benefit is not passed to consumer and seller increases his profit margin, the prices of goods can also see a rising trend.

However, GST is a long term strategy and the positive impact shall be seen in the long run only. Let us hope GST proves to be a game changer in a positive way and proves to be beneficial to the common man.

**GST – Analysis and Opinions**

GST is purported to bring in the 'one nation one tax' system, but its effect on various industries will be slightly different. The first level of differentiation will come in depending on whether the industry deals with manufacturing, distributing and retailing or is providing a service.

**Impact of GST on Manufacturers, Distributor and Retailers**

GST is expected to boost competitiveness and performance in India's manufacturing sector. Declining exports and high infrastructure spending are just some of the concerns of this sector. Multiple indirect taxes have also increased the administrative costs for manufacturers and distributors and it is being hoped that with GST in place, the compliance burden will ease and this sector will grow more strongly.

**Impact of GST on Service Providers**

As of March 2014, there were 12, 76,861 service tax assesses in the country out of which only the top 50 paid more than 50% of the tax collected nationwide. Most of the tax burden is borne by domains such as IT services, telecommunication services, Insurance industry, business support services, Banking and Financial services etc. These pan-India businesses already work in a unified market, and while they will see compliance burden becoming lesser there will apparently not be much change in the way they function even after GST implementation.

**Sector-wise Impact Analysis**

**Logistics**

In a vast country like India, the logistics sector forms the backbone of the economy. We can fairly assume that a well organized and mature logistics industry has the potential to leapfrog the "Make In India" initiative of the Government of India to its desired position.

**E-com**

The e-com sector in India has been growing by leaps and bounds. In many ways, GST will help the e-com sector's continued growth but the long-term effects will be particularly interesting because the model GST law specifically proposes a tax collection at source (TCS) mechanism, which e-com companies are not too happy with. The current rate of TCS is at 1% and it'll remain to be seen if it dilutes the rapid boom in this sector in any way in the future.

**Pharma**

On the whole, GST is expected to benefit the pharma and healthcare industries. It will create a level playing field for generic drug makers, boost medical tourism and simplify the tax structure. If there is any

concern whatsoever, then it relates to the pricing structure (as per latest news). The pharma sector is hoping for a tax respite as it will make affordable healthcare easier to access by all.

### **Telecommunications**

In the telecom sector, prices are expected to come down after GST. Manufacturers will save on costs through efficient management of inventory and by consolidating their warehouses. Handset manufacturers will find it easier to sell their equipment as GST will negate the need to set up state-specific entities, and transfer stocks. They will also save up on logistics costs.

### **Textile**

The Indian textile industry provides employment to a large number of skilled and unskilled workers in the country. It contributes about 10% of the total annual export, and this value is likely to increase under GST. GST would affect the cotton value chain of the textile industry which is chosen by most small medium enterprises as it currently attracts zero central excise duty (under optional route).

### **Real Estate**

The real estate sector is one of the most pivotal sectors of the Indian economy, playing an important role in employment generation in India. The probable impact of GST on the real estate sector cannot be fully assessed as it largely depends on the tax rates. However, it is a given that the sector will see substantial benefits from GST implementation, as it will bring to the industry much required transparency and accountability.

### **Agriculture**

Agricultural sector is the largest contributing sector to the overall Indian GDP. It covers around 16% of Indian GDP. One of the major issues faced by the agricultural sector is transportation of agri products across state lines all over India. It is highly probable that GST will resolve the issue of transportation. GST may provide India with its first National Market for the agricultural goods. However, there are a lot of clarifications which need to be provided for rates for agricultural products.

### **FMCG**

The FMCG sector could see significant savings in logistics and distribution costs as the GST will eliminate the need for multiple sales depots. The GST rate for this sector is around 17% which is way lesser than the 24-25% tax rate paid currently by FMCG companies. This includes excise duty, VAT and entry tax – all of which will be subsumed by GST.

### **Freelancers**

Freelancing in India is still a nascent industry and the rules and regulations for this chaotic industry are still up in the air. But with GST, it will become much easier for freelancers to file their taxes as they can easily do it online. They will be taxed as service providers, and the new tax structure will bring about coherence and accountability in this sector.

### **Automobiles**

The automobile industry in India is a vast business producing a large number of cars annually, fueled mostly by the huge population of the country. Under the current tax system, there are several taxes applicable on this sector like excise, VAT, sales tax, road tax, motor vehicle tax, registration duty which will be subsumed by GST. Though there is still some ambiguity due to tax rates and incentives/exemptions provided by different states to the manufacturers/dealers for manufacturing car/bus/bike, the future of the industry looks rosy.

### **Startups**

With increased limits for registration, a DIY compliance model, tax credit on purchases, and a free flow of goods and services, the GST regime truly augurs well for the Indian startup scene. Currently, many Indian states have very different VAT laws which can be confusing for companies that have a pan-India presence, specially the e-com sector. All of this is expected to change under GST with the only sore point being the reduction in the excise limit.

### **Banking, Financial Services And Insurance (BFSI)**

Among the services provided by Banks and NBFCs, financial services such as fund based, fee-based and insurance services will see major shifts from the current scenario. Owing to the nature and volume of operations provided by banks and NBFC vis a vis lease transactions, hire purchase, related to actionable claims, fund and non-fund based services etc., GST compliance will be quite difficult to implement in these sectors.

### **III. Conclusion**

GST is at the infant stage in Indian economy. It will take some time to experience its effects on Indian economy. GST mechanism is designed in such a way that it is expected to generate good amount of revenue for both central and state government. Regarding corporate, businessmen and service providers it will be beneficial in long run. It will bring transparency in collection of indirect taxes benefiting both the Government and the people of India.
