Abstract: *In this study, engineering, numerical sciences, mathematical statistics and technological studies conducted by the academic staff of Bitlis Eren University have been evaluated. The main purpose here is to determine the areas where academicians work. The reasons for the results in the articles have not been addressed, and the studies that academicians have conducted according to their area of interest have been examined*

Keywords: *Engineering, Technology, Mathematics, Statistics, Academic trends*

Date of Submission: 09-12-2017

Date of acceptance: 27-12-2017

I. Introduction

Bitlis Eren University was built on a land of two thousand decare in 2007. The university is operated with 2 Institutes, 5 Faculties, 3 Academies and 7 Vocational High schools. At this University which is one of the most important social responsibility projects, 9160 students and more than 400 academicians are provided the ability to carry out scientific researches. Along with Faculty of Science and Letters, Faculty of Fine Arts, Faculty of Economics and Administrative Sciences, Faculty of Islamic Sciences and Faculty of Engineering and Architecture, there are 3 academies and 7 vocational high schools. Bitlis Eren University offers post graduate education opportunity at Faculty of Sciences and Social Sciences and runs research centers working on 7 different fields. Rectorate building and Faculty of Arts and Sciences building, Faculty of Architecture and Engineering are now in use. There is also one Eren Holding Guesthouse and Bitlis Eren University Memduh Eren Mosque. Bitlis Eren University rector's building is seen in Figure 1.

Figure 1. Bitlis Eren University Rectorate Building

Mission: Bitlis Eren University has the principle of integrating universal values with country values; fair, reliable and tolerant with the basis of love and respect, in the academically freedom environment; science,

technology and art's original, modern and superior qualifications to individuals; producing knowledge in education, teaching and service fields; maintaining the progress of region and country.

Vision: With transparency and participation principle; innovation in science and technology, qualification in education and training, aiming to develop, schooling for precedent individual, being respectful to society values becoming a university.

II. Academic Studies

Some academic studies done by Bitlis Eren University academicians are tabled for easy examination. A study covering a summary of engineering, numerical sciences, mathematical statistics and technological studies has been carried out. Table 1 shows some academic studies in the last 5 years.

III. Conclusion

When some recent academic studies were examined, which are total of 100 articles, it can be seen that 14 articles in the field of statistics, 40 articles in the field of electrical and electronics engineering, 18 article in the field of mechanical and industrial engineering, 13 articles in the field of power engineering, 14 articles in the field of civil engineering and 1 article in the field of work security have been studied. Studies in the field of civil engineering are based on the field of road covering and road strength. In the field of electrical-electronics engineering, it is seen that the work mainly focused on solar energy, lighting and energy saving. Power engineering seems to focus on intelligent networks. In the field of statistics, it is understood that the articles using optimization and related mathematical methods are written.

The overall trend shows that efficiency and use of renewable energy sources are given too much importance. Various mathematical methods have been used to emphasize optimizing methods for efficiency and saving. It is also seen that that academic articles related to road coating are also increasing in the field of transportation.
