Abstract: In our nation English is significant for a number of logics. India is a land of multiplicity. Diverse people converse various languages. A person of South India does not speak Hindi. So he can't recognize Hindi of a person from North India. However, he can understand English. So, English is a connection language. Different people can correspond with one another with the assist of English. Secondly, all advanced knowledge in science, technology and medicine is accessible in English. The outcomes of the most recent researches come to India in English language. If we neglect English, we will be behind in the privileged fields of study. Today, the world has been one family. It is all possible only through English. English is a universal language - the language of the organization, the Supreme Court, the High Courts and official departments. English is now confidently entrenched in India. It has turned out to be a part of Indian life. Thus, English has great significance for the consistency of India. It has to be a second language in our country for the better growth of the country. In this paper, I have attempted to reveal the tribulations undergone by teachers of English subject, in educating students of Engineering and Technology, at the same time difficulty faced by students in learning English. I have also recommended some inferences and practices to expand all skills correlated to English Language that might be positive for both-students and teachers.
